

THE WORLD OF SUNRISE

POLIADA

POLIADA INTRODUCTION

Poliada: Exploring a New Digital Universe - <https://poliada.io/en>

Introduction: Poliada stands as a groundbreaking digital universe, a realm teeming with diverse races, creatures, and characters. This innovative gaming platform empowers players with complete control over their digital assets, allowing them to buy, sell, and trade with the same fluidity as physical collectible cards and items.

Expanding the Universe: The Poliada universe is dynamic, continuously expanding through new games, mechanics, and experiences. Many of these events provide players with the opportunity to engage in competition, employing intricate strategies and tactics to ascend to higher ranks and reap coveted rewards.

Ownership Beyond Characters: In Poliada, players not only own in-game characters but also possess unique inventories and abilities, creating an endless array of combinations to craft truly distinctive personas. All in-game characters are categorized into races, and the unfolding narrative of the universe is shaped by the players themselves as they compete among various factions.

Poliada is not just a game: it's a living, breathing universe where players shape the destiny of the digital realm. As participants traverse this innovative space, they embark on a journey of endless possibilities, strategic challenges, and collaborative storytelling that redefine the gaming experience.

MISSION

The goal of Poliada is to create a distinctive gaming universe where players truly own in-game resources. We aspire to provide an opportunity for both the gaming community and developers to actively expand this world, inviting everyone to participate and craft unforgettable gaming experiences.

Absolute Resource Ownership: Poliada empowers players with real ownership of in-game resources, granting them full control over their gaming experience.

Community Engagement: Poliada is designed for every member of the gaming community to actively contribute to the development and shaping of the game world, making it more captivating.

Expanding the Universe: We encourage the gaming community and developers to actively push the boundaries of our universe, introducing new possibilities and adventures.

P.A

POLIADA STANDS OUT

Exciting Gameplay: Poliada delivers an immersive gaming experience through meticulously crafted gameplay mechanics. Players have the freedom to devise and employ unique gaming strategies, leveraging an array of distinctive elements such as various game modes, exceptional characters, diverse armor sets, weaponry, and specialized abilities. This rich variety enhances competitive events, enabling players to earn upgrades and make strategic purchases from the in-game store.

Campaign: We provide an unforgettable adventure in the Poliada universe. Each season you will face new challenges and enemies, fighting for your faction and defending the world. Scenario playthroughs will be available from the first levels, each new attempt at a scenario will be different from the previous one, as the opponent and the story using the latest AI technology will adapt and change depending on your actions, choices and other events in the universe.

Ecosystem: The technical part of the project is a synthesis of web2 and web3 technologies, providing management of the economy and the universe as a whole. By locking their tokens, community members will have access in a game format to the entire ecosystem of the project. They will be able to enjoy special content, create their own pools of liquidity to exchange resources, interact with the AI of the project, influence the development of the system, create events and their own unique content.

Competitive Element: What sets Poliada apart is its strong focus on the competitive aspect. The game places a premium on player skills and strategic prowess. With unique characters, engaging tournaments, faction-based rankings, and competitions between factions for substantial rewards, Poliada takes gaming sessions to new heights, ensuring a compelling and motivating experience for players seeking competitive challenges.

Rewards: Poliada introduces a novel reward system for players engaging in competitive Player vs. Player (PvP) and Player vs Environment (PvE) battles. Successful participants receive rewards in the form of non-fungible token (NFT) inventory, PADA tokens, and other valuable in-game web2 and web3 resources. The integration of NFT technology ensures that virtually all in-game assets, including armor, weapons, skills, characters, and upgrades, are owned directly by the players. This groundbreaking approach allows the seamless transfer of gaming assets across different Poliada universes, setting it apart from traditional games where resources are confined within a single application. This forward-thinking design provides players with unprecedented flexibility and ownership of their digital possessions.

GAMEPLAY

Poliada is a turn-based tactic battlefield where players engage in 3D unit combat, each representing unique characters with distinct abilities. Players are divided into factions competing against each other. The goal is to defeat opponents within the faction, elevate personal ratings, and secure victories for their empire in grand tournaments. The game emphasizes intricate strategies and tactics to earn rewards and various enhancements.

Key features:

PvE Campaign: Poliada offers diverse game modes to cater to players with varying goals and preferences. Engage in player-versus-player battles, climb the ranks, embark on a single-player campaign, win unique gear, upgrades, and participate in seasonal tournaments.

PvP Variety: Poliada offers diverse game modes to cater to players with varying goals and preferences. Engage in player-versus-player battles, climb the ranks, embark on a single-player campaign, win unique gear, upgrades, and participate in seasonal tournaments.

Play-to-Earn (P2E): Victorious battles yield rewards in the form of loot boxes containing NFT inventory, tokens, and other in-game resources. Loot boxes come in different types, with legendary loot boxes presenting higher chances of obtaining rare items, collections, and resources.

Battle Pass: Unlock tournament participation opportunities through the Battle Pass, available through subscription or as a one-time entry for PADA tokens.

Tournaments: Weekly, monthly, and seasonal tournaments provide players with chances to participate via the Battle Pass, earning legendary loot boxes and showcasing their skills on the battlefield.

In-Game Shop: Accessible within the game, players can purchase loot boxes for in-game currency.

Game Portal Shop (Website): On the gaming portal website, players can use PADA tokens to acquire legendary items, skills, and additional effects. All items are represented as NFTs, allowing players to apply acquired elements to their in-game characters after purchase and integration.

GAME PORTAL

Gaming Portal for Enhanced Experience

Poliada will offer a dedicated gaming portal, serving as a centralized hub for providing feedback, delivering updates, showcasing roadmaps, and featuring an exclusive NFT marketplace. This portal will be designed to enhance player engagement and convenience by offering:

News and Updates: Stay informed about the latest news, developments, and exciting updates within the Poliada universe. The gaming portal serves as a reliable source for timely information, keeping players engaged and aware of the evolving game dynamics.

Roadmaps: Access detailed roadmap outlining the future trajectory of Poliada. Understand the upcoming features, enhancements, and expansions planned for the game, providing players with insights into the exciting journey ahead.

Marketplace: Explore the NFT marketplace within the portal, where players can indulge in acquiring unique character skins. This marketplace adds a layer of personalization, allowing players to enhance their in-game personas with exclusive and customizable cosmetic items.

Feedback Mechanism: Players can conveniently provide feedback, ensuring an open channel for communication between the community and the development team. This fosters a collaborative environment, allowing continuous improvements based on player input.

The gaming portal is a testament to Poliada's commitment to player satisfaction, community involvement, and the seamless integration of innovative features, creating a comprehensive platform for an enriched gaming experience.

RESOURCES

Poliada has a multi-resource model for the development of characters and their equipment. Each resource is presented as an in-game resource (web2) and its derivative in the blockchain utility token (web3). This establishes a connection between the game's economy and the project's economy.

The primary resource is **Amber** in the game and the **PADA** token on the blockchain. Each resource utility token can be issued in exchange for the in-game resource with a token creation fee, or it can be burned and removed from circulation 1:N in exchange for in-game resources.

A **5% fee** is charged for issuing the PADA token in exchange for AMBER, based on the **1:80 ratio**, which equals 4 AMBER. For issuing other utility tokens, the 5% AMBER fee is based on the average market price of the PADA token for the day. For example, if the average token price was 10, then 5% would be $0.5 * 80 = 40$ AMBER.

PADA (AMBER) 1:8

Token issuance (minting) is available for players at level 50 or after completing the first campaign.

Token issuance (minting) can be temporarily suspended if:

The **treasury** pool of **PADA** or other tokens for the season is exhausted and needs to wait for new burns.

The current market price of **PADA** is below the **LW (low price = 0.20)** mark

NFT

All characters, artifacts, and skins in Poliada are NFTs. Throughout the game, you can enhance your characters' skills, their items, and add skins to them. This process adds value to the NFT, which can subsequently be exchanged for PADA tokens in the marketplace. This serves as a reward for your efforts and time spent in the game.

The process of creating such an NFT with added value involves creating a new unique element in the collection by burning its separate parts using **Amber**.

You can upgrade a particular ability of your character, add a skin, level up, enhance your equipment with additional stats, and then use Amber to issue the item or character as a unique NFT element. During this process, you burn the NFT parts that were used.

The following requirements must be met to seal the current character

- Character level: Lv. 50 or above (50/50)
- Resealing must not be on cooldown.
- The character must be minted as an NFT.
- All EXP and items must be restored.
- Must not be in a party.
- Must not be in a guild or union.
- Must not have any unclaimed items or Diamonds from the Exchange.
- The Product Storage must be empty.

You can also perform the reverse process of dismantling an NFT with added value. In this process, you will receive 50% of all the resources spent, while the item or character will be burned.

The developer company releases only basic characters and various visual skins. The creation of NFTs with added value is solely up to the gaming community.

Partner gaming companies will be able to offer their model and skin developments through our ecosystem's NFT marketplace. The NFT marketplace also supports royalties.

TREASURY

To engage and reward players, 50% of the total possible number of PADA coins will be "buried" or reserved within the universe.

The distribution will occur in equal shares over 10 seasons, with 10% allocated each season, corresponding to 10 years from the release of the first game.

After each token burning (i.e., exchange for in-game resources), 50% of the burned tokens are returned to the treasury of the next season. For marketplace purchases, 50% goes to the current season's treasury.

Further management of the treasury will be handled by Poliada Underground.

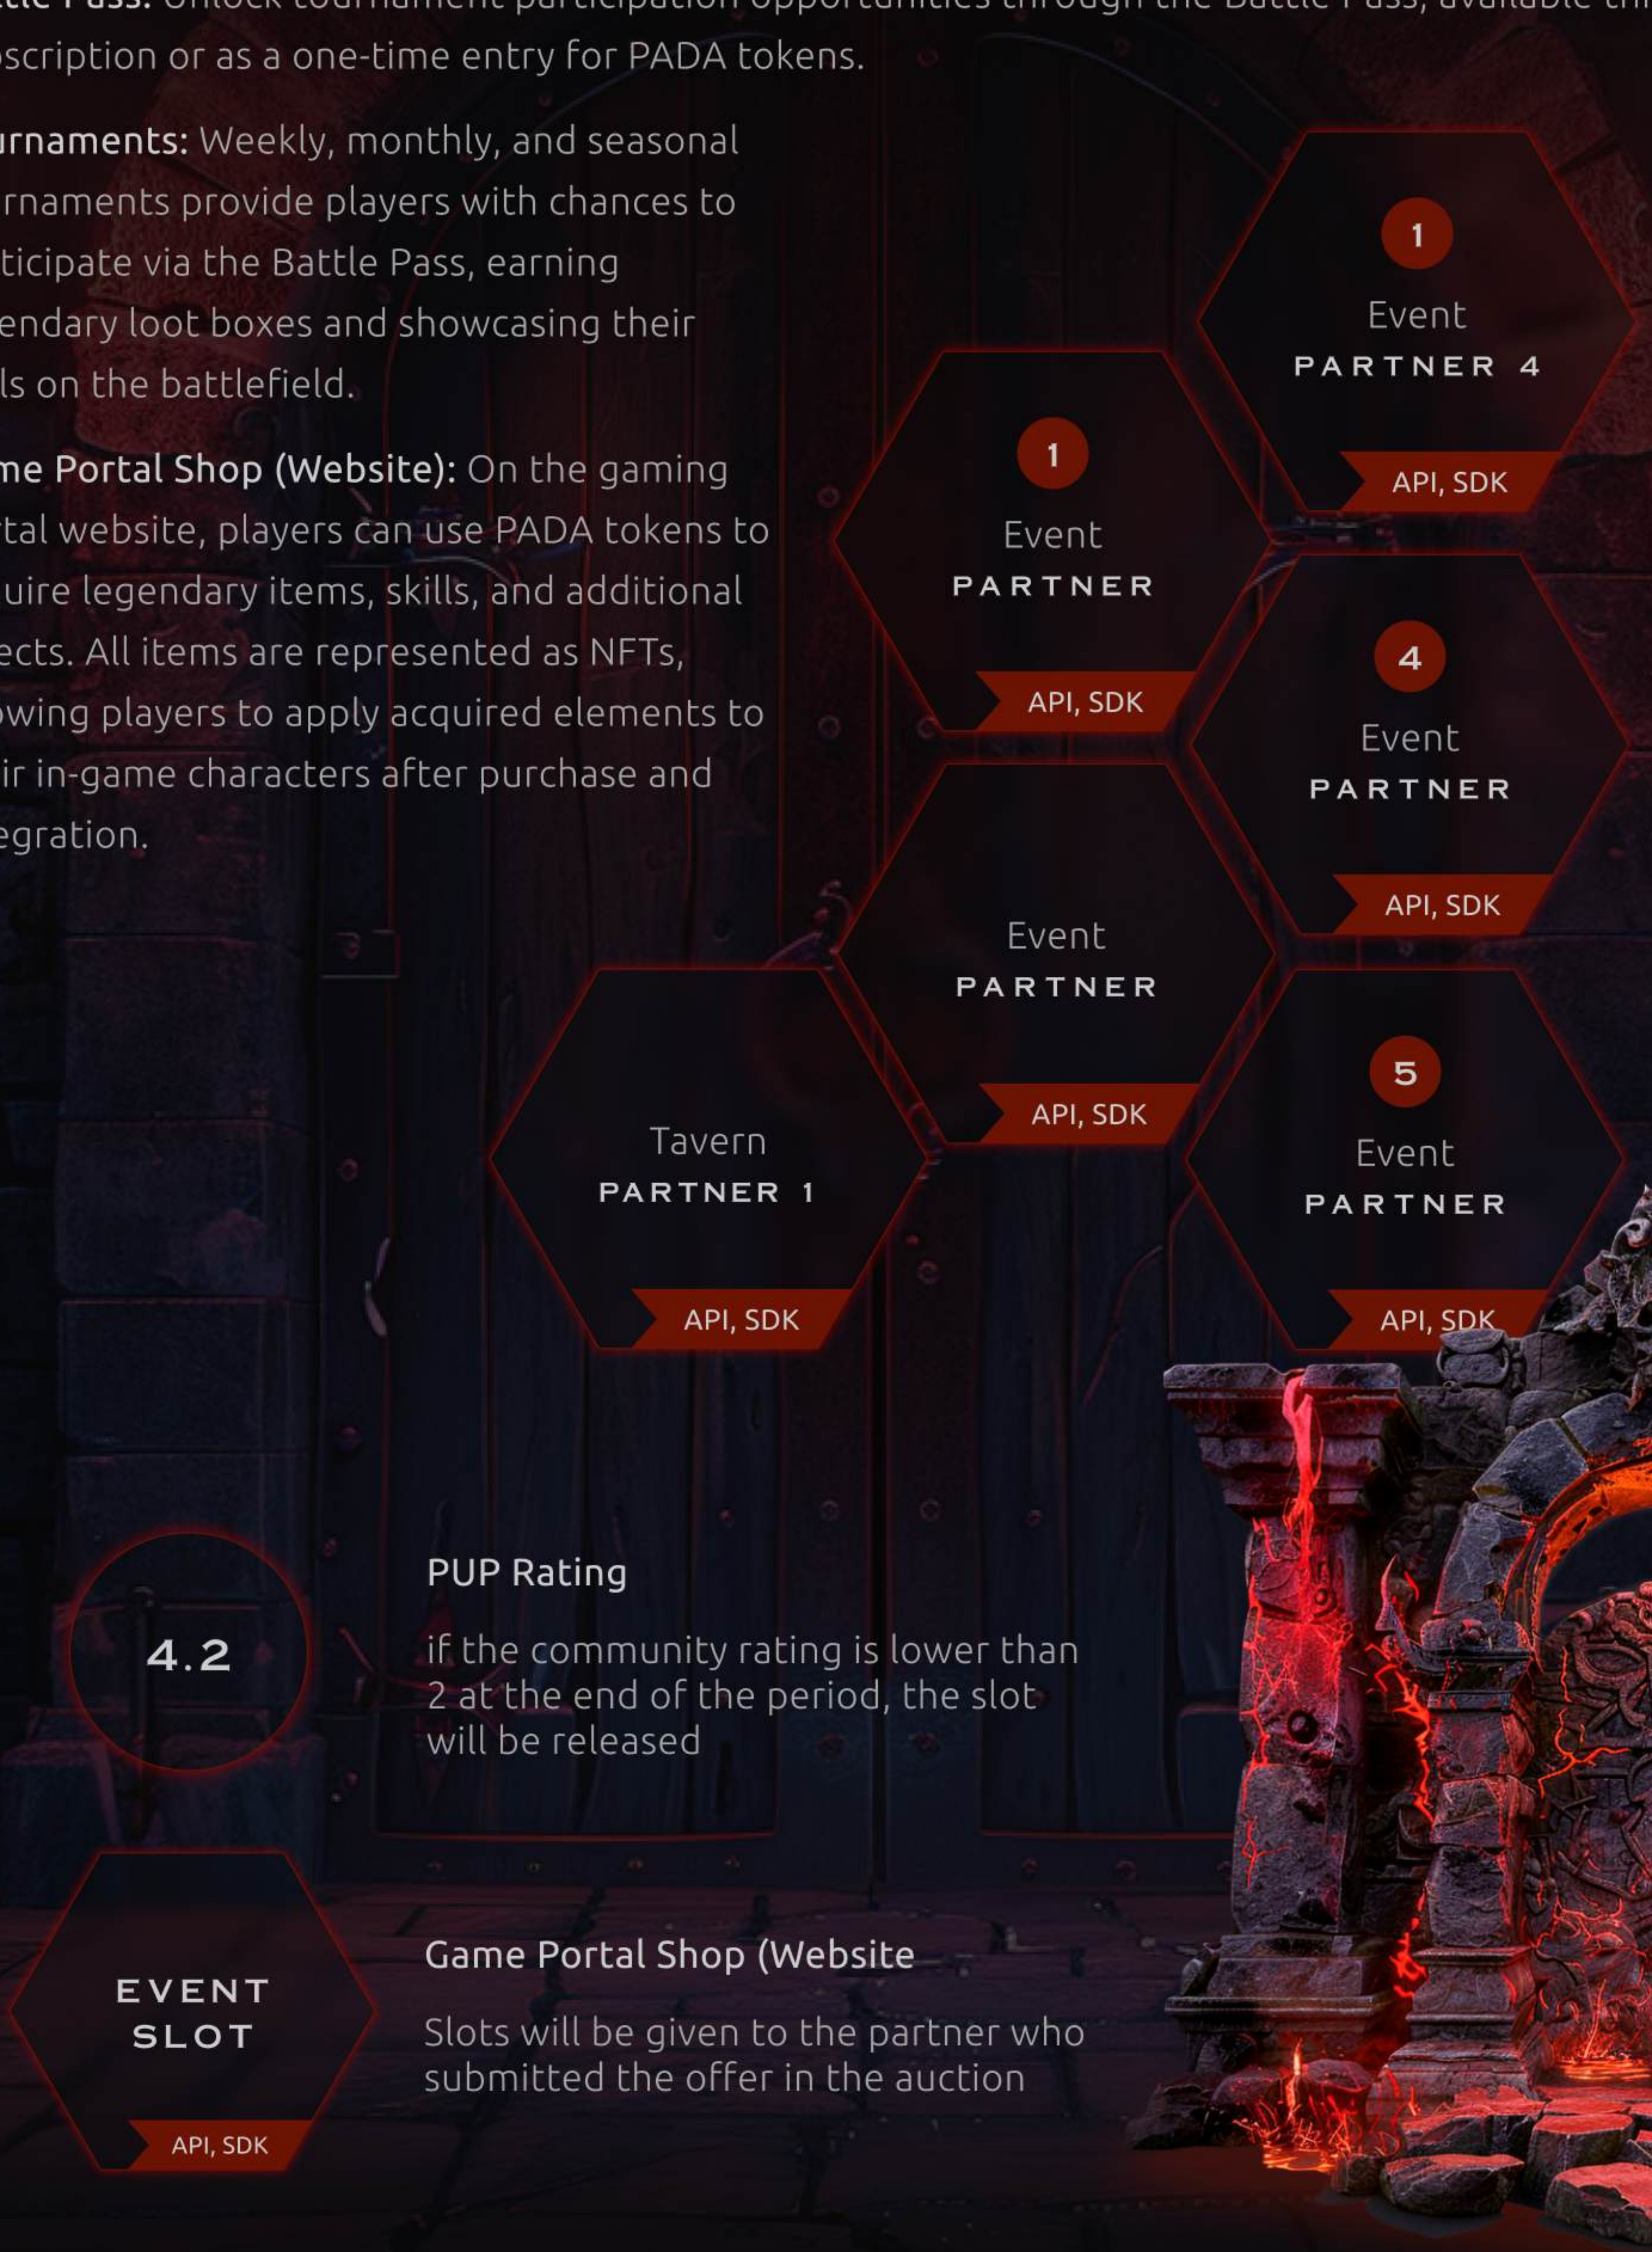

POLIADA UNDERGROUND

It represents a metaverse where you can enjoy not only additional content like board games and interaction with other participants but also engage with the universe's ecosystem.

Battle Pass: Unlock tournament participation opportunities through the Battle Pass, available through subscription or as a one-time entry for PADA tokens.

Tournaments: Weekly, monthly, and seasonal tournaments provide players with chances to participate via the Battle Pass, earning legendary loot boxes and showcasing their skills on the battlefield.

Game Portal Shop (Website): On the gaming portal website, players can use PADA tokens to acquire legendary items, skills, and additional effects. All items are represented as NFTs, allowing players to apply acquired elements to their in-game characters after purchase and integration.

4.2

PUP Rating

if the community rating is lower than 2 at the end of the period, the slot will be released

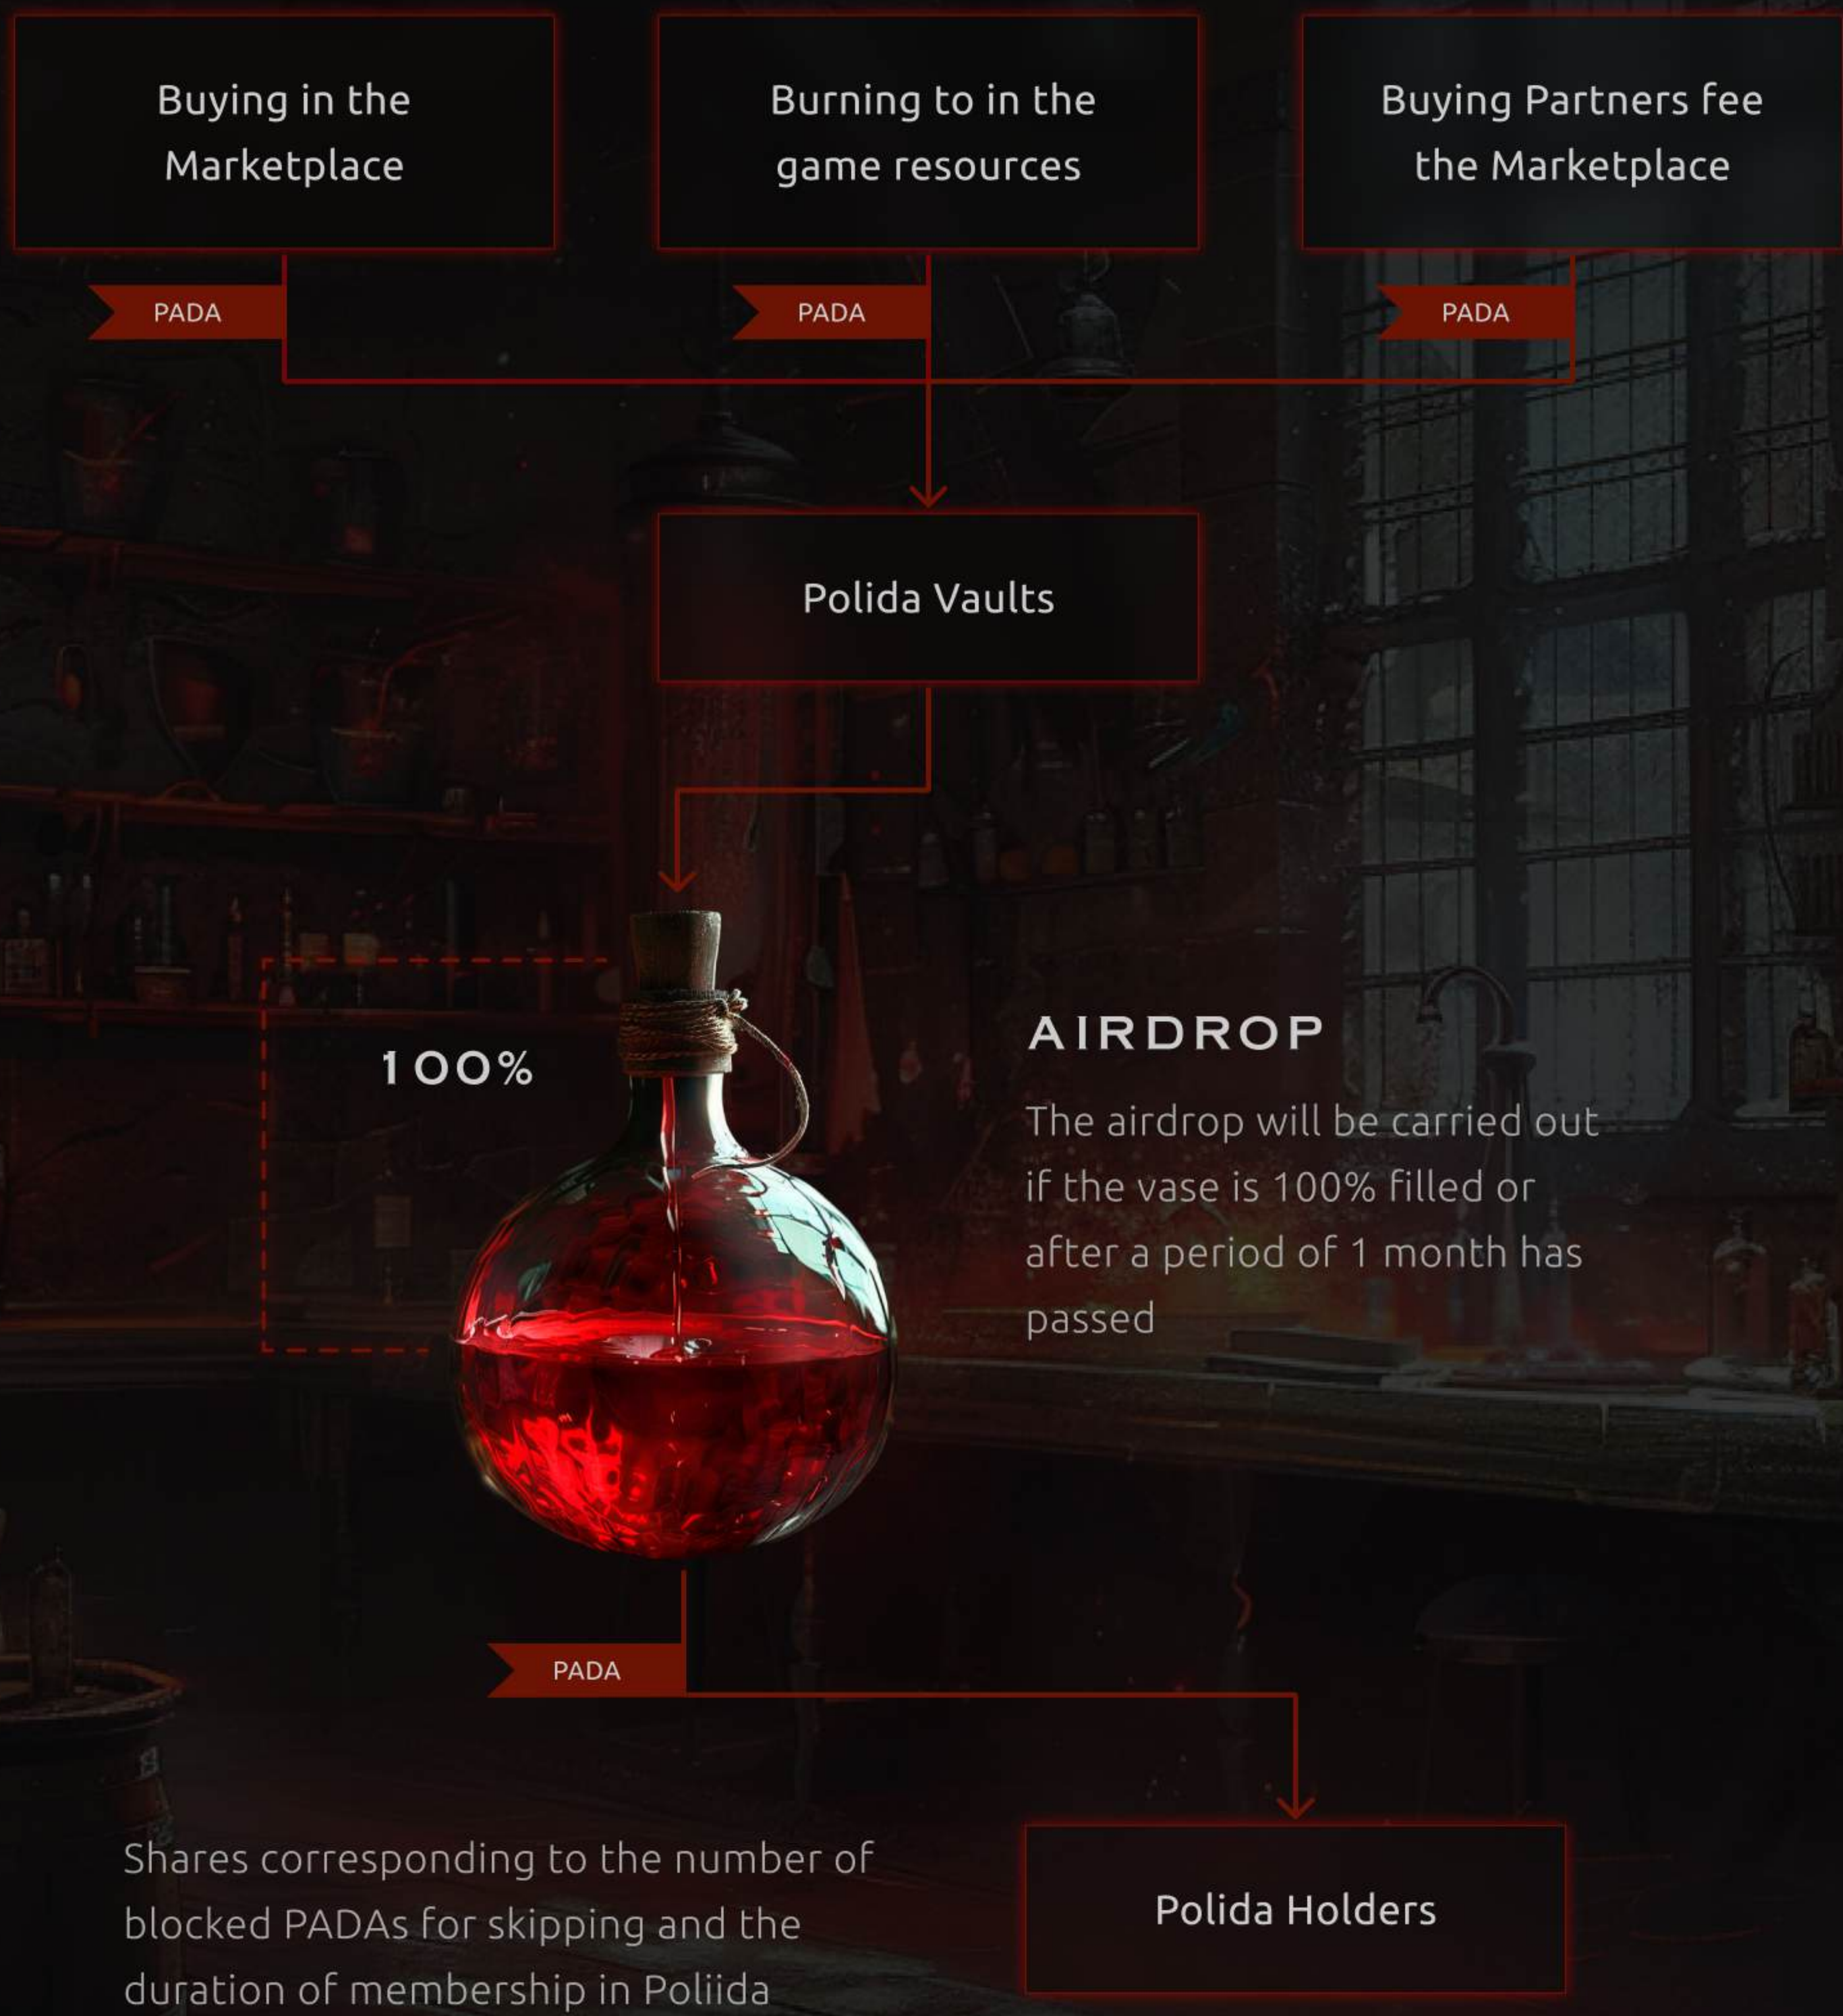

EVENT SLOT

Game Portal Shop (Website)

Slots will be given to the partner who submitted the offer in the auction

PV Stone: A place in Poliada Underground where all members can make suggestions for the development of the universe and cast their vote. Minting a proposal will require a PADA cost. Proposals that do not reach the required number of votes or are blocked by members will eventually be removed from the PV Stone.

Rewards Vase: Each reporting period of 1 month, the Rewards Vase is filled with PADA from Marketplace commissions, affiliate commissions, and token burn. At the end of the reporting period, the PADA token is distributed to all residents in proportions corresponding to the amount of blocked PADA for skipping and the duration of membership in Poliada Underground.

Lands & Mines: The lands represent a limited NFT collection. The plots are divided into classes 1-5, where the class indicates the productivity of mines and their quantity. Each plot can contain 1-3 mines of in-game resources of the universe (see Resources). The Land Lord of a plot will need to develop it by constructing various buildings using TOFTE, balancing resources, and managing subordinates to earn in-game resources.

The sale of resources is carried out by adding them to the common resource pool for players in the in-game store, and it affects their final price for players in TOFTE. For example, putting 100 units up for sale at the current price of 100 mirium to 1 TOFTE, with current stocks of 1000 mirium, will cause a 10% price drop. Therefore, Land Lords need to consider market influence to earn as much TOFTE as possible and then exchange it for PADA coin. The issuance is limited to 50,000 plots of classes 1-5, with gradual unlocking over 5 years, starting with an initial release of 1%. Land purchase is conducted through an auction over the specified period, starting from the initial price depending on the class of the plot.

ECOSYSTEM ECONOMY

The project's ecosystem comprises several integral components:

Liquidity Pools: These pools supply gas and processing capabilities, providing liquidity for the exchange of tokens and resources.

Poliada Underground: A staking functionality that offers additional content and serves as an avenue for participation within the ecosystem.

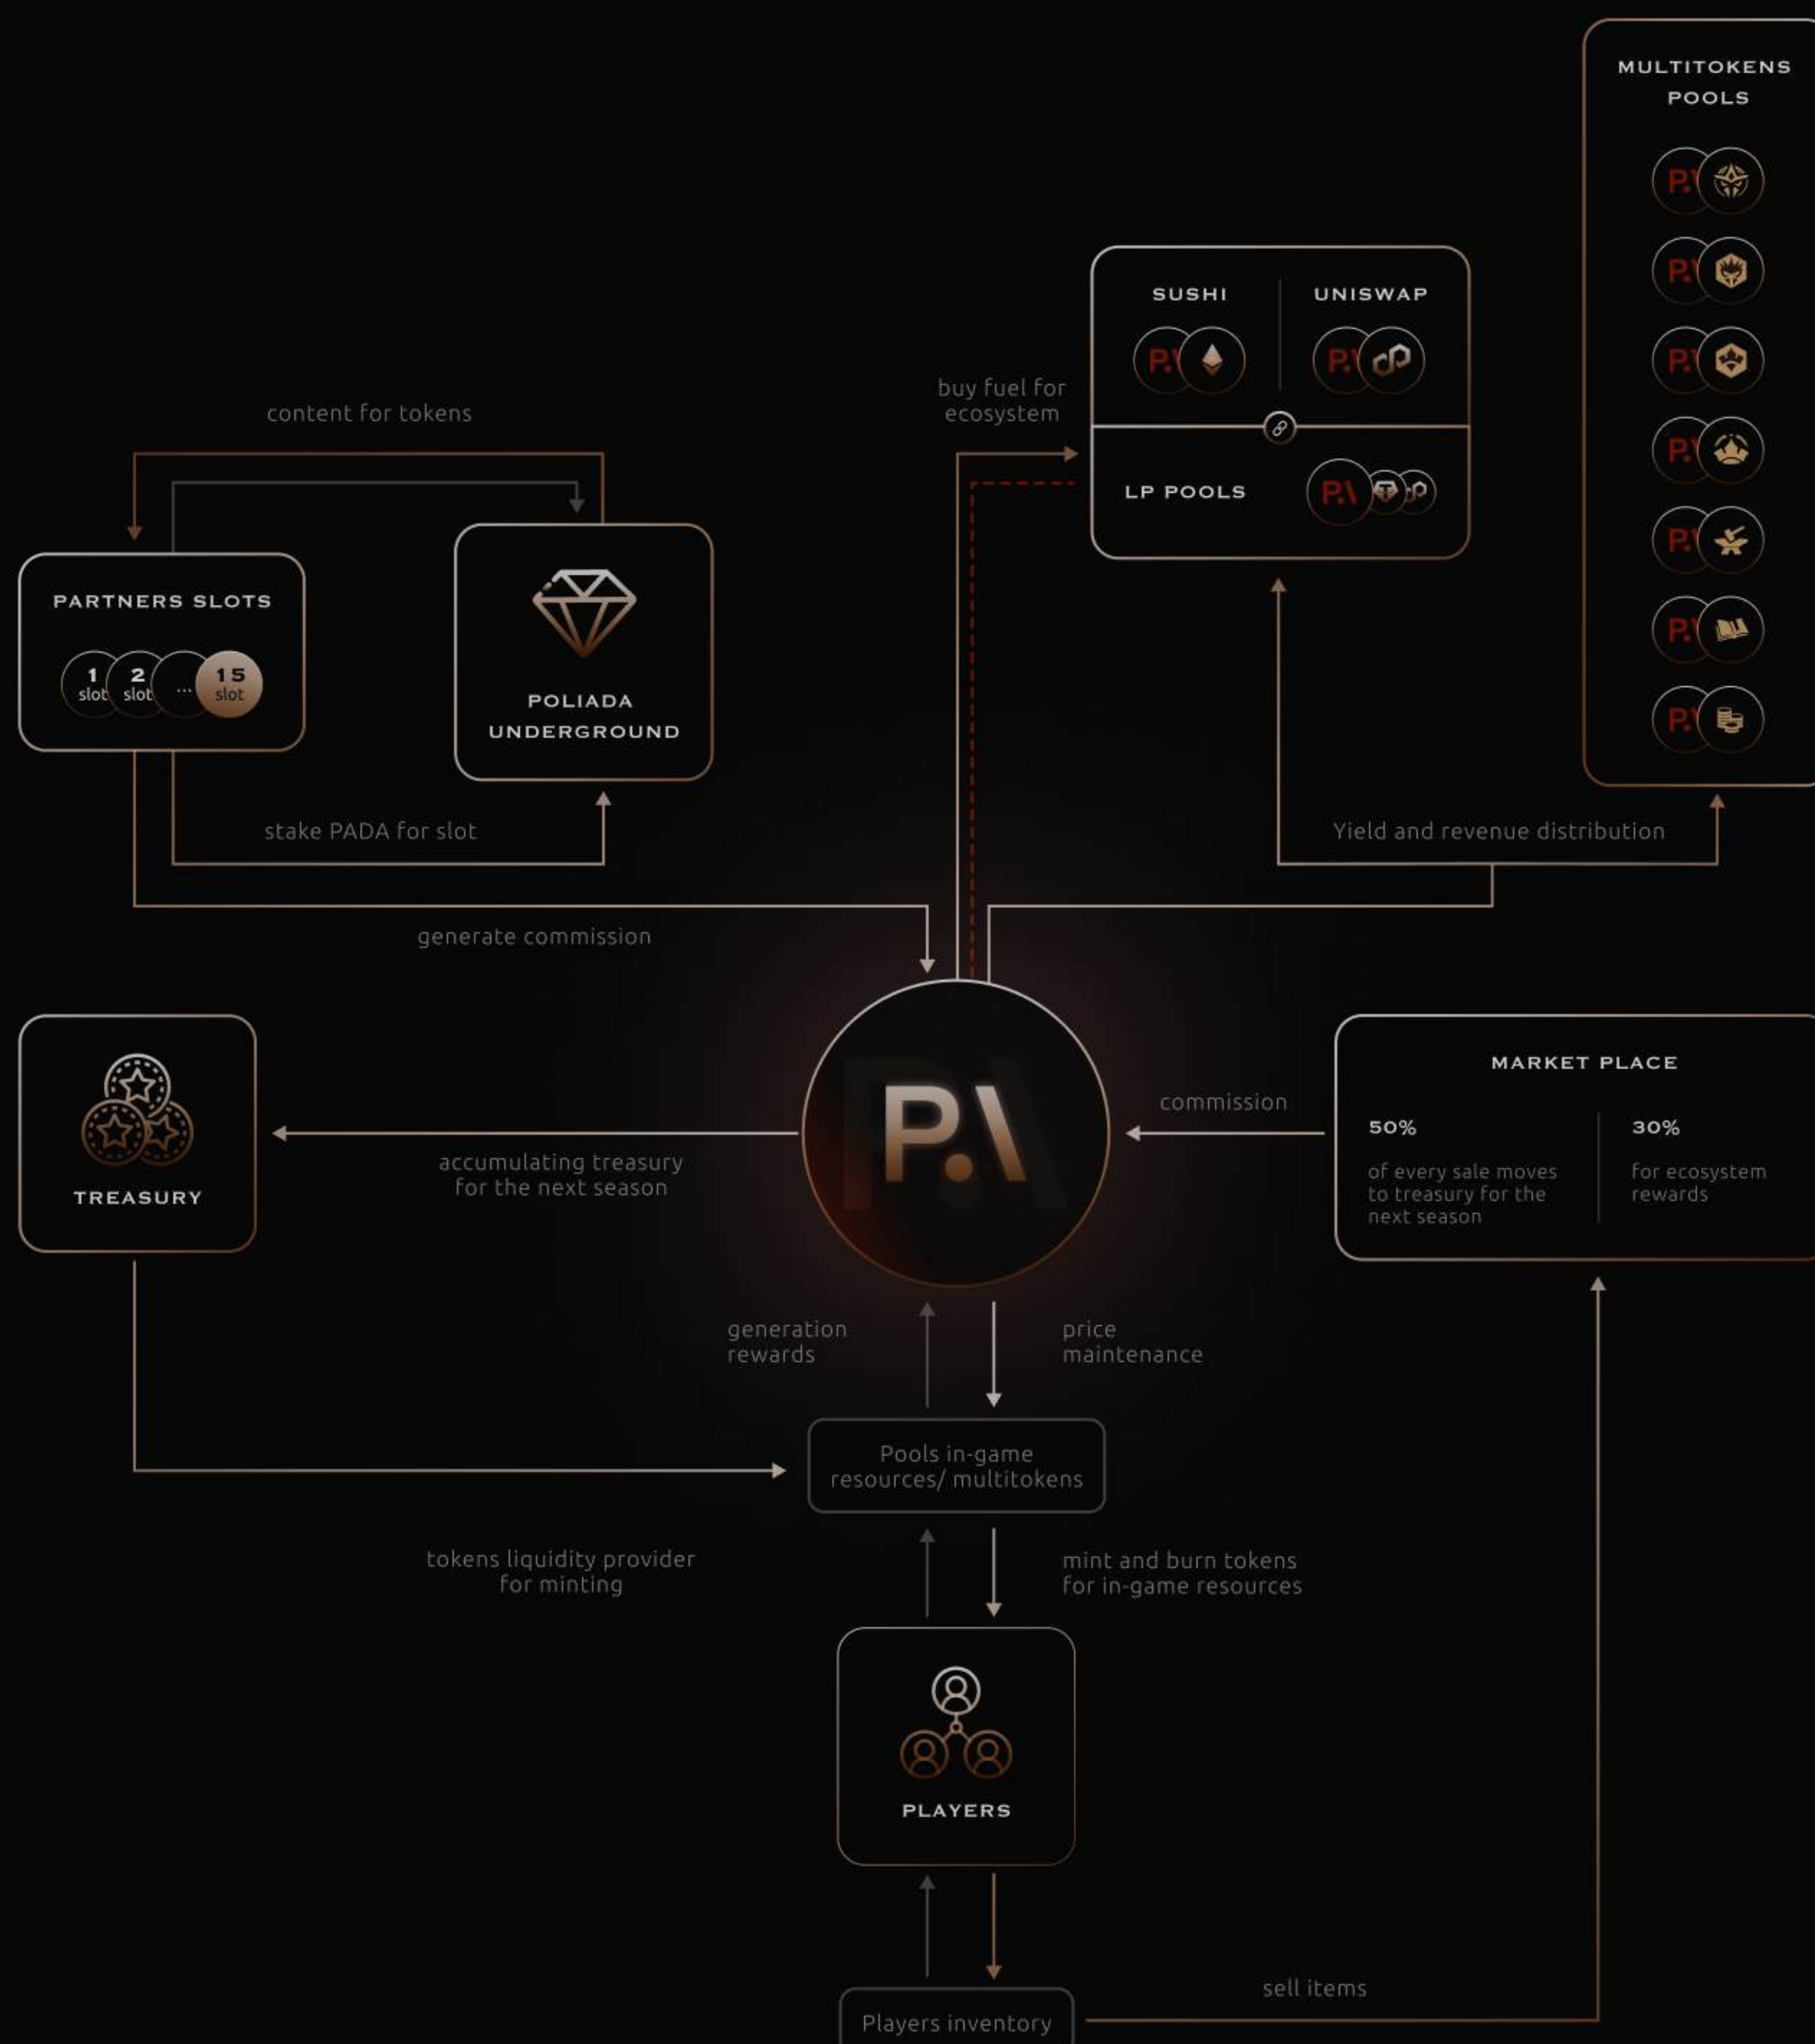

Marketplace: A platform for trading and exchanging assets within the ecosystem.

Personalized Smart Contract Wallets: Customized wallets used for direct interaction with the ecosystem and gas stations, enhancing user engagement and experience.

Treasury and Game Resource Pools: These pools facilitate the connection between the ecosystem's economy and the games within the universe.

All interactions within the ecosystem do not require additional tokens for blockchain network fees; they are exclusively conducted using the **PADA coin** from the user's smart wallet.

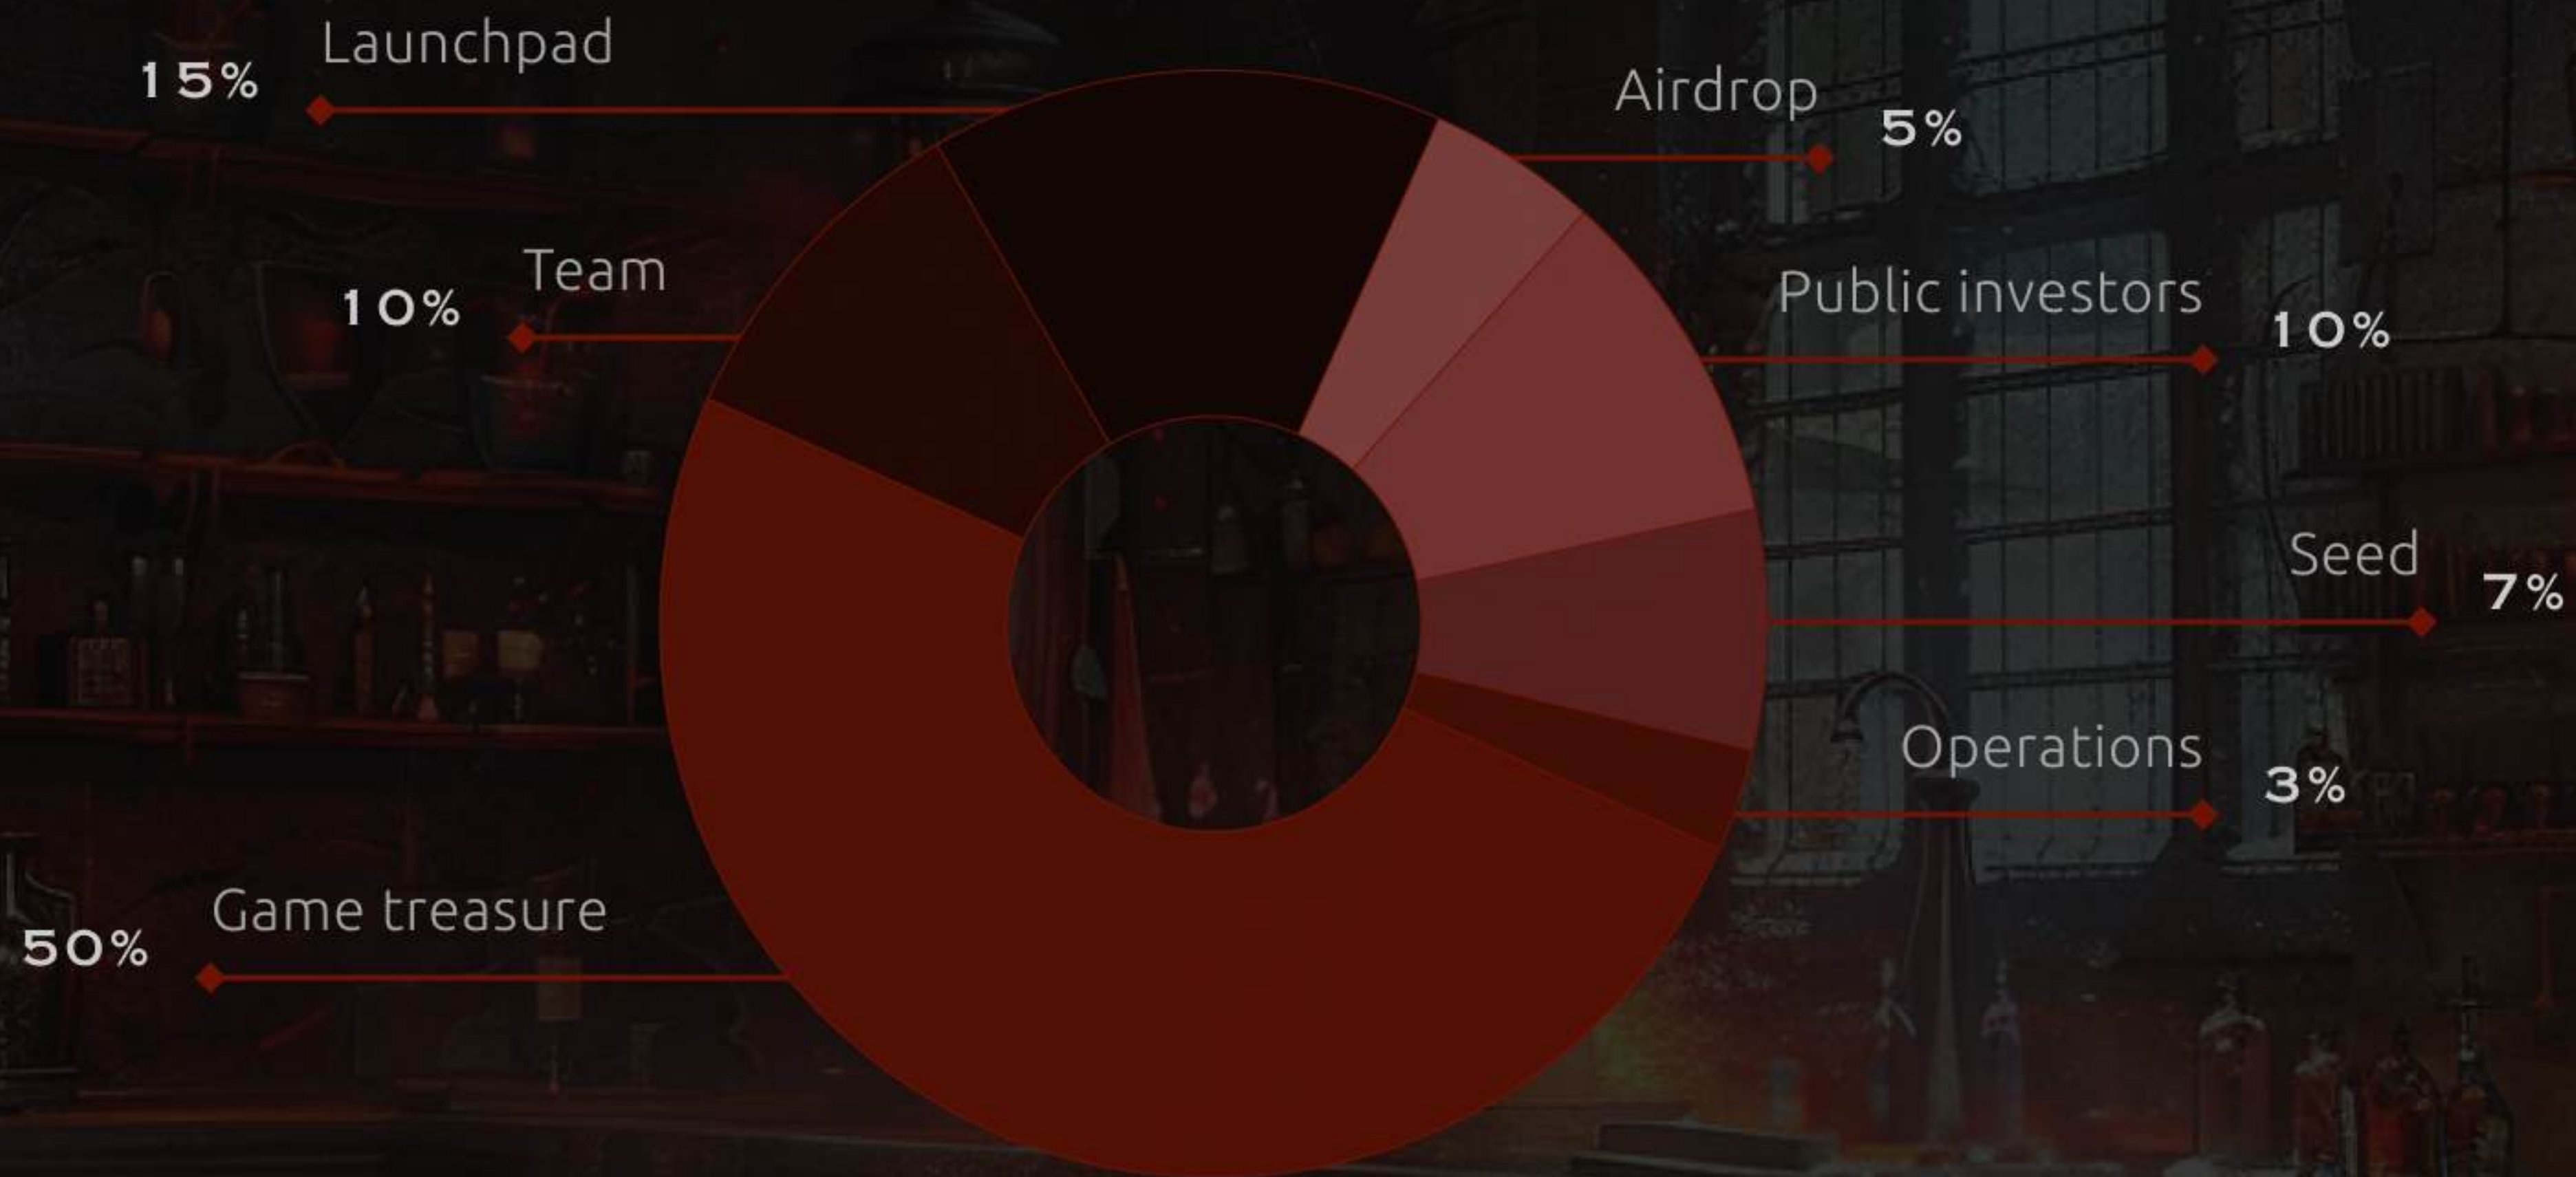

The entire ecosystem and its economy are governed by smart contracts, ensuring transparent and decentralized operations. All transactions within the ecosystem are recorded and displayed in a personalized transaction scanner, providing users with clear visibility into their activities.

TOKENOMICS

The economy of the universe is represented as a "Multi-utility Token" system, with the primary token being PADA. PADA is a limited ERC-20 token operating on a mint and burn principle. Token exchanges within the universe are conducted through project liquidity pools.

The maximum supply of PADA is set at 1,000,000,000 tokens.

The initial token issuance comprises 17% of the total circulation for conducting seed and public presale rounds.

Feedback Mechanism: Players can conveniently provide feedback, ensuring an open channel for communication between the community and the development team. This fosters a collaborative environment, allowing continuous improvements based on player input.

Other tokens will be limited to 100 million and will be issued upon player request in exchange for in-game resources.

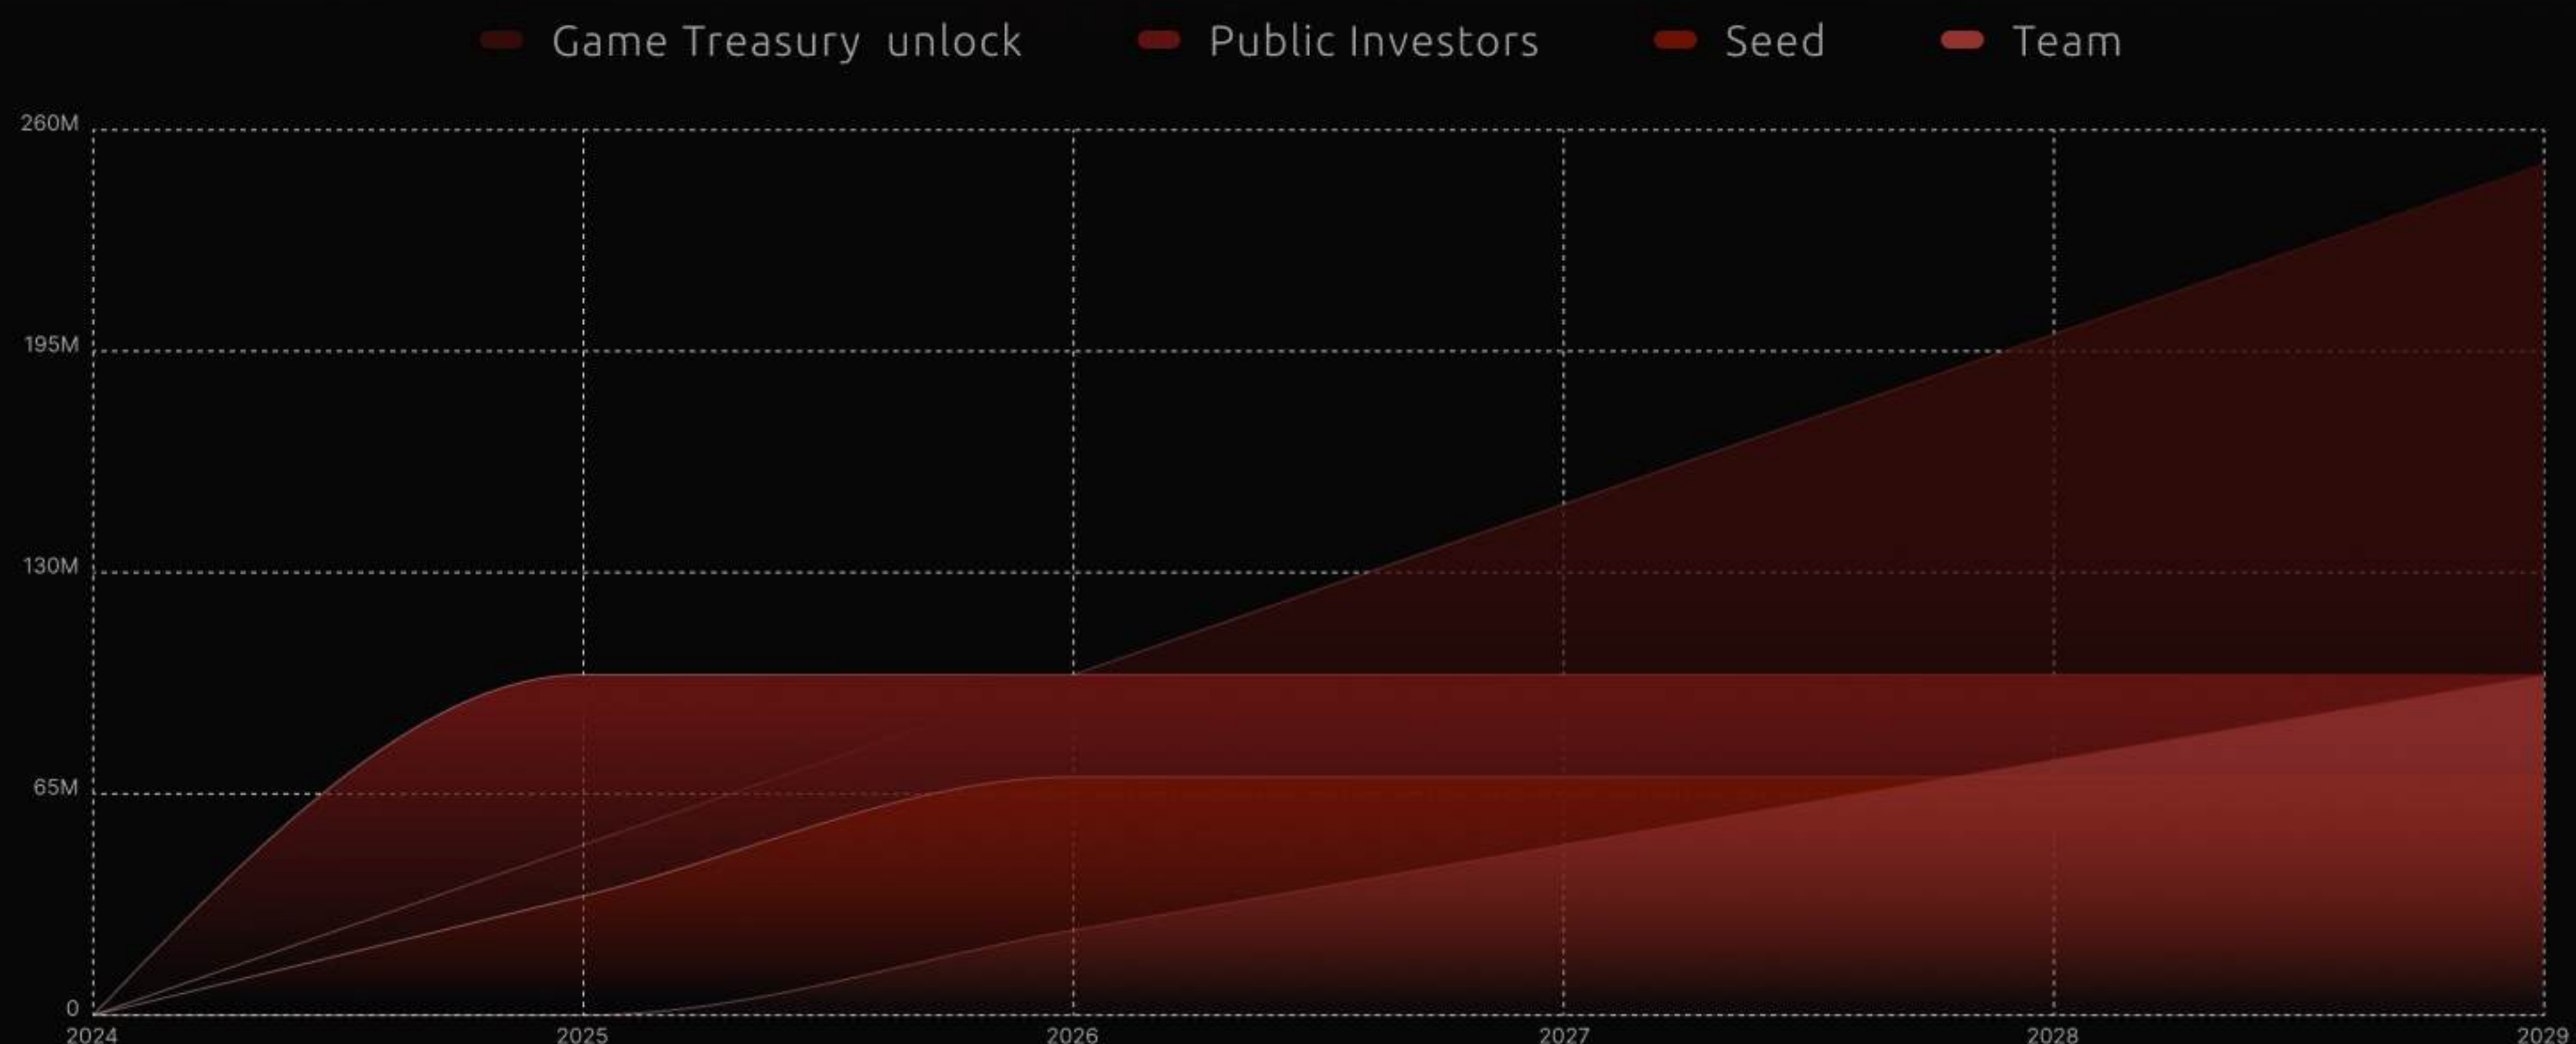

VESTING:

Seed Round: For the Seed Round, 7% of the total token supply will be allocated. We are offering a significant discount per token and many bonuses. The vesting of tokens will occur in 4 stages, every 6 months after the Seed Round ends:

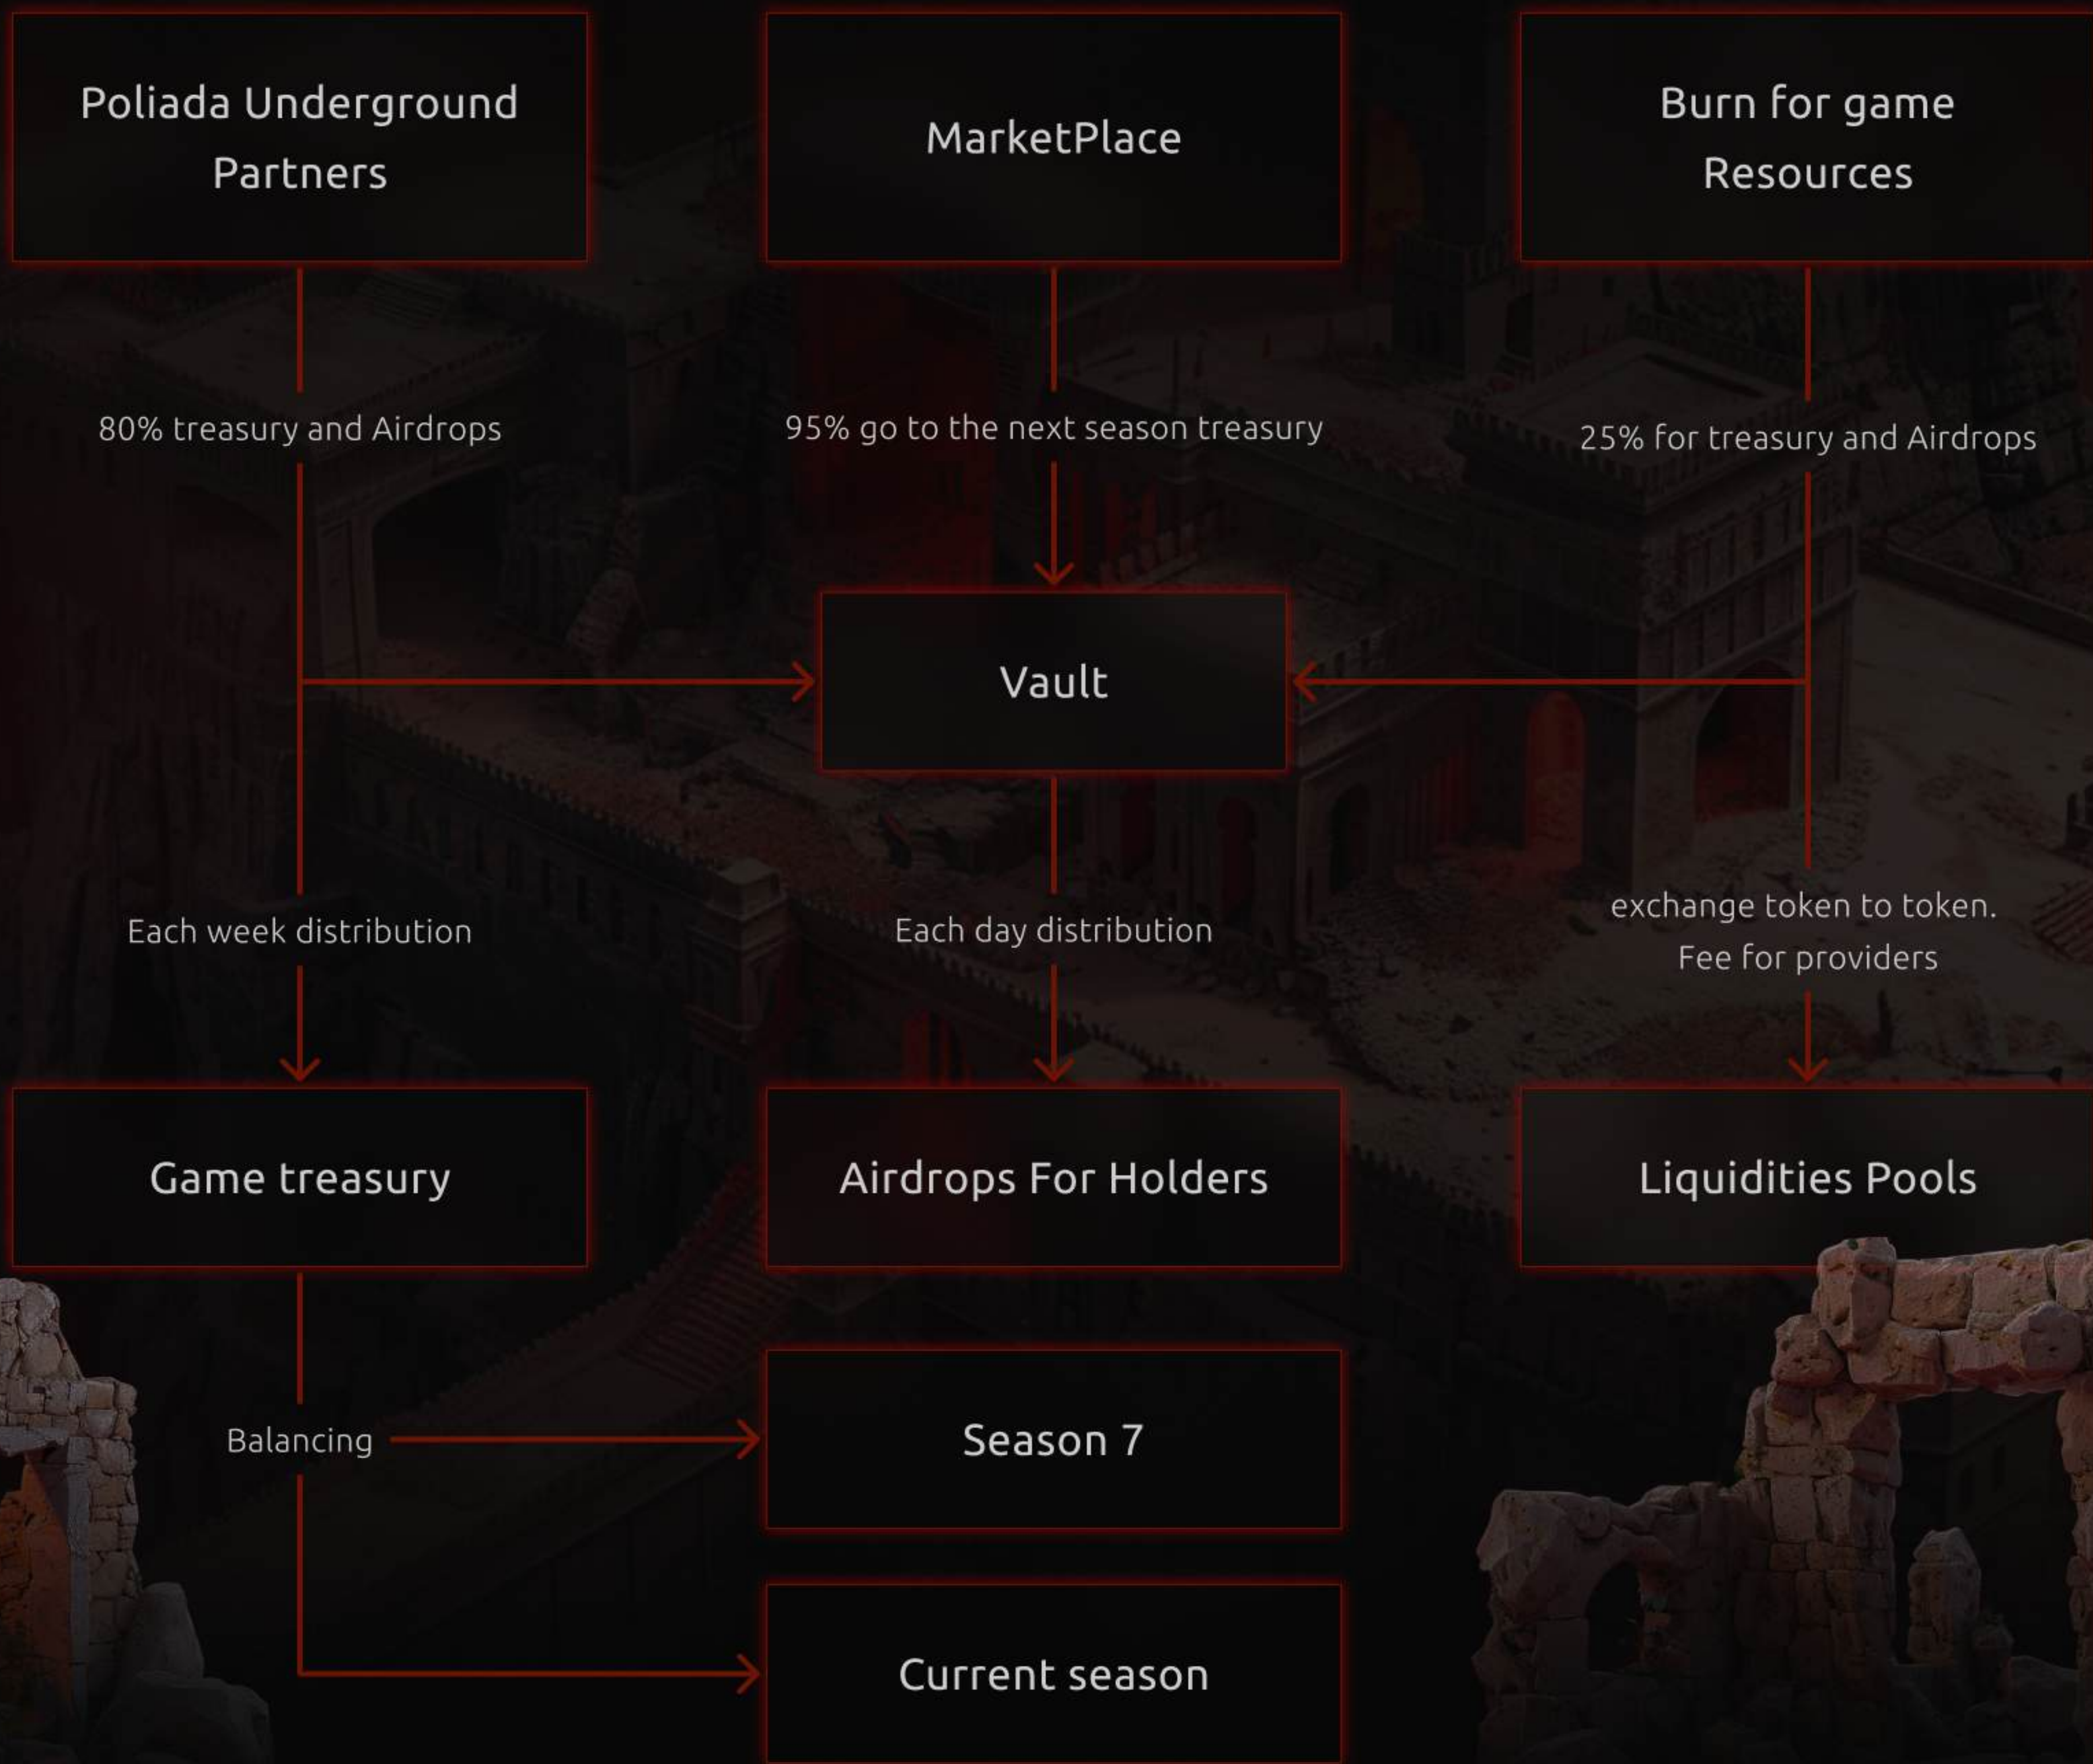

- After 6 months, the investor will receive 25% of the tokens.
- After 12 months — 50%.
- After 24 months — 100%.

Public Round: For the Public Round, 10% of the total token supply will be allocated. To ensure fair price discovery, we will use the Smart Liquidity Balancer Pool protocol, with initial parameters of 90% PADA Tokens and 10% USDT, and an initial price of 0.2 USDT per PADA token. This pre-sale will continue until a balance of 50% tokens and 50% USDT in the liquidity pool is achieved.

For the team, the unlocking period is scheduled over 4 years in equal parts, starting from the year after the first game is released. The unlocking of the game treasury will occur annually over the first 4 years and will be replenished automatically from various fees. See Game Treasury.

Economy: All fees and part of the revenue will be distributed between the Game Treasury and Holders (Poliada Underground members).

WALLET

Poliada project offers an innovative blockchain ecosystem with specialized wallets that simplify user interaction and enhance security. By requiring all transaction fees to be paid exclusively in PADA token, users no longer need to acquire multiple tokens to perform network operations or engage with our platform—this unified approach lowers barriers to entry and fosters user growth.

Additionally, our wallets employ modern authentication methods, such as social authentication and biometric data, reducing the risk of losing access to funds and building greater user trust. The wallet is an interface that gives the player access to their universe resources and the ability to use the Poliada ecosystem on the game portal (website). Poliada also supports popular wallets such as MetaMask and Trust Wallet.

MARKETPLACE

Access to the marketplace is provided through the gaming portal (website). The marketplace consists of two parts: various visual skins and heroes provided by the development company, and items with added value that players can list on the marketplace. Buying and selling items is done using PADA tokens by authorizing a wallet.

ROADMAP

Q4 2023

- Prepare game vision
- Tokenomics
- Website
- Social media

Q1 2024

- Game development
- Preparing 3D characters sets

Q2 2024

- NFT contracts
- Develop NFT MarketPlace

Q3 2024

- Provide NFT characters on the game portal MarketPlace
- Develop Ecosystem

Q4 2024

- Launch Ecosystem in Testnet
- Wallets
- Marketing promotion
- Seed investing phase

Q1 2025

- Public investing phase
- Provide pre-alpha version
- Publishing on crypto markets
- New game trailers
- Marketing

Q2 2025

- Alpha version
- Develop Poliada Underground:
- Pass (staking)
- Prepare Airdrop

Q3 2025

- Platform validation (IOS, ANDROID)
- First Launch in one region
- Airdrop
- Tournament

Q4 2025

- Poliada Underground: Taverns
- New campaigns Season 2 and 3
- New characters
- New Game development

Q1 2026

- Poliada Underground: PV StonePoliada
- Underground: API, SDK for partners
- New tournament

Q2 2026

- New game release
- Poliada Underground: Lands
